1. Why clinics buy Clinic OS

ليه العيادة تشتري النظام؟

نظام عام لأي عيادة: بدل الدفتر وواتساب والإكسل — استقبال، أطباء، متدربين، مرضى، ومالية بالجنيه، عربي وإنجليزي.

Clinic OS is not a "booking widget." It is the daily operating system of a physical-therapy clinic: who is in which room, who supervised vs who performed the session, what package remains, what was paid in EGP, and what the owner sees at month-end.

For the owner / admin

- Live dashboard: income, expenses, net, workload by doctor & trainee
- Finance summary with clinic economics (targets, slices, MANG / BASKET)
- Audit trail of who changed what, on which platform
- Role & privilege control down to chat media types

For reception & floor staff

- Day schedule by rooms · conflict prevention
- Statuses that match real life: apologized / absent with or without cause
- Packages, services, price quote at the front desk
- Create patients without forcing them through self-registration only

For doctors & trainees

- Own schedule or clinic-wide (by privilege)
- Rich medical notes, VAS, progress, documents
- Performing-doctor credit without breaking billing
- In-app clinic chat with media

For patients

- Same app: book, view appointments, profile
- Price quote for services & packages
- Push / reminder awareness (mobile)
- Arabic or English UI

2. Platforms & delivery

المنصات وطريقة التسليم

One Flutter codebase. Clinics can run reception on a desktop browser, doctors on phones, and owners on tablets — without buying three different products.

Capability	Web	Android	iOS	Notes
Full clinic UI (roles, appointments, finance, chat…)	**Yes**	**Yes**	**Yes**	Responsive mobile / tablet / desktop
Cloud hosting (SPA)	**Firebase Hosting**	—	—	Instant updates for all web users
App Store / Play / APK	—	**APK + AAB path**	**IPA / Archive**	Android in-app update via version manifest
Push notifications (FCM)	**Yes (VAPID)**	**Yes**	**Yes**	Appointments + chat
Local appointment / todo reminders	—	**Yes**	**Yes**	~1 hour before + day-of
PDF & Excel export / share	**Download**	**Share / save**	**Share / save**	Arabic-capable PDF fonts + reshaper
Google Sign-In	**Popup**	**Plugin**	**Plugin**	New Google users default to patient
macOS / Windows / Linux folders	Present in project for desktop expansion; primary production targets are Web + Android + iOS.			

Update & release model

- **Web:** rebuild + Firebase Hosting deploy — all browsers get the new build.
- **Android:** optional remote `version.json` / Dropbox APK URL with release notes, min supported build, force-update.
- **iOS:** App Store / Transporter via Xcode archive (IPA).

3. Roles, privileges & security

الأدوار والصلاحيات والأمان

Built-in roles

Role	Typical access
Admin	Everything: dashboard, users, finance, audit, chat oversight, settings
Supervisor	Near-admin operations; can book past dates (migration); audit read
Secretary	Users, appointments, reports, chat defaults (view-all / manage group)
Doctor	Appointments, patients, reports, own doctor profile, chat
Trainee	Chat by default; appointments/patients via grants; can be performing doctor
Patient	My appointments, profile, book, price quote, chat

Privilege model (sales differentiator)

- **Multi-role users** (e.g. admin + doctor) via roles array.
- **Per-user permission overrides** — admin edits privileges without redeploying.
- Fine-grained clinic keys: admin dashboard, appointments see-all / view-all, patients edit, income, finance summary, reports, requirements, admin todos.
- Fine-grained **chat** keys: start chats, message anyone, send text/image/video/audio/voice/document, save media, broadcast, create/manage groups, retention, delete own / delete any, chat settings.

Security posture (honest positioning)

- Firebase Authentication (email/password, Google); inactive accounts blocked.
- Firestore & Storage security rules gated by role helpers + permission checks.
- Staff can create patient Auth accounts via secure Cloud Functions (not "open signup only").
- Immutable audit log (create-only; admin/supervisor read).
- Position as: *role-gated cloud clinic system with audit & Firebase rules* — not a certified EMR/HIPAA claim unless separately certified.

4. Appointments & schedule (core floor ops)

المواعيد وجدول العيادة

جدول يومي بالغرف، منع التعارض، حالات اعتذار/غياب حقيقية، باقات، وفلاتر للمشرف والقائم بالجلسة.

Views

- **List view** with status chips, date navigation (day / month / year), search.
- **Schedule (day) view**: time slots every 30 minutes (00:00–23:30), rooms as columns, sticky-friendly layout for reception desks.

Create / edit appointment fields

- Patient, supervising **Doctor**, optional **Performing doctor** (doctor or trainee)
- Room, date, start/end time, multiple services, linked package
- Cost, discount %, notes, optional extra slot, VIP star

Statuses that match Egyptian clinic language

- Pending · Confirmed · Attended (completed) · Cancelled
- Absent · **Apologized (absent with cause)** · Absent without cause / no-show
- Cancelled / absent / no-show do **not** keep occupying the room slot

Slot & conflict rules

- Up to **3 main + 1 extra** appointments per time slot / day logic used by the clinic.
- **Room overlap blocked** so two sessions cannot claim the same room at overlapping times.

Filters & payment on complete

- Filter by service, package, supervising doctor, **performing doctor**, status, search (patient / doctor / performer / service).
- On complete: paid / partial / prepaid / not paid — can create linked income entry.
- Dashboard "today's appointments" shows `supervisor / performer` when they differ.

Who sees what

- Doctors default to their own book; privileges unlock clinic-wide see-all / view-all.
- Admin / supervisor can book **past dates** for data migration.

- Patients self-book via dedicated booking dialog.

5. Performing doctor & session workload

الدكتور القائم بالجلسة وجهد الجلسات

Built for training clinics and busy floors where the billing doctor is not always the person who ran the session.

- **doctorId** = supervising / billing doctor (income stays here).
- **performingDoctorId** = who actually performed (doctor doc id or trainee user id) — **stats only**.
- Admin dashboard **Session workload** table + chart: counts as supervisor, as performer, and total.
- When supervisor ≠ performer, **both get credit** (dual count). Legacy sessions without a performer stay "as performer = 0".
- Visible on appointments list, dashboard, patient detail, and admin reports — never silently changes money.

6. Patients & medical records

المرضى والسجل الطبي

Patient management

- Searchable list (cached), deep-link search query support.
- Staff creates patients via Cloud Function (email account + profile) — front desk friendly.
- **Patient code** for clinic IDs; login with email *or* patient code.
- Secondary phone, AR/EN display names.
- VIP / starred patient flag for priority clients.

Medical profile (deep)

- Demographics: DOB or age, gender, address, occupation, referred by, marital status, areas to treat, fees type, followed-by doctor.
- Clinical: chief complaint, diagnosis, medical history, treatment goals/plan, progress notes, pain (VAS), contraindications, previous PT/surgery, treatment progress.
- **Rich text (Quill)**: bold, underline, size, color; Delta JSON (HTML/plain fallback); per-field label colors.
- Session notes: VAS, ROM, function, progress, free notes.

Documents & patient PDF report

- Upload/view: ray, lab, report, image, PDF, note — images fullscreen; PDF via viewer.
- **Patient report PDF**: personal + medical + sessions (+ weekday on dates) + payments + packages; Arabic fonts + reshaper; chunked tables for large histories (stable on mobile).

7. Services, packages & price quote

الخدمات والباقات وعرض الأسعار

- **Services catalog**: AR/EN names, amount per session, used in booking.
- **Packages**: AR/EN name & description, linked services, session count, fixed amount, active flag.
- Appointments link to `packageId`; package progress tracked in patient admin screens.
- **Price Quote** screen (available broadly): public-facing list of active services & packages for front-desk quoting without opening finance.

8. Income, expenses & finance summary

الدخل والمصروفات والملخص المالي

Income & expenses

- Default currency **EGP**.
- Income: amount, source, date/time (can preserve session time), notes, doctor/patient, appointment link, payment status; add/edit/delete; search; day/month/year summaries.
- Expense categories: **Salary, Rent, Supplies, Media, Other** (+ recipient for salary, paid-by-doctor).
- Category mapping into finance summary buckets (e.g. Salary→Receptionist, Rent→Rent+Guard, Media→Media).

Finance summary (owner P&L style)

- Per-doctor income, 30% target, bonus, slice-based commission table, consumables, media.
- Shared lines: Rent+Guard, Receptionist.
- Outputs familiar to partner clinics: **NET, MANG, BASKET**, profit; reorder doctor rows; config saved per month.
- Periods: month / quarter / 6 months / year.
- **Bilingual PDF** with Amiri + Arabic reshaper; download/share on all primary platforms.

9. Reports, Excel & PDF

التقارير وتصدير Excel وPDF

- Tabs for income/expenses, appointments, patients, users (as permitted).
- Period filters: day / month / year.
- Export colored **PDF** and **Excel/CSV**.
- Web: download; mobile: share sheet / save.
- Admin can also export selected dashboard charts into a combined statistics PDF.

10. Admin dashboard & charts

لوحة تحكم المسؤول والرسوم البيانية

- Period filters: day, week, month, whole month, pick month, 3–12 months, custom range.
- Charts (bar / line / pie): appointments trend, income vs expense, users by role, income by doctor, **session workload**, expenses by category, expense by doctor, appointments by status / service / package.
- Period totals: income, expense, net.
- Shortcuts: rooms, manage doctors, audit log, migrate staff-created patients.
- Dynamic multi-chart PDF export for owners and partners.

11. Clinic chat & media

محادثات العيادة والوسائط

- 1:1 chats, **groups**, **broadcast**.
- Media: text, image, video, audio file, voice note, documents (PDF thumbnails).
- Reactions, read receipts, save media (permissioned).
- Retention settings + scheduled Cloud Function cleanup.
- Quiet hours respected in Functions; FCM on new messages; deep-link into conversation.
- Oversight: view-all for admin / supervisor / secretary when granted.

12. Notifications & reminders

الإشعارات والتذكيرات

- **FCM push** (including web): appointment booked/status changes to patient, doctor, and secretaries — Arabic-friendly bodies with patient/doctor names, services, package session.
- **Local reminders** on Android/iOS: ~1 hour before + day-of; rescheduled when appointments change.
- **In-app bell**: upcoming appointments, audit (admins), open todos — dialog on desktop / sheet on phone.
- Chat message pushes with quiet-hours awareness.

13. Doctors, rooms & VIP

الأطباء والغرف والتمييز VIP

Doctors

- Public “Our doctors”: specialization, qualifications, certifications, bio (AR/EN).
- My doctor profile + availability (weekday slots, duration).
- Admin: manage / link doctor documents to users.

Rooms

- CRUD rooms used as schedule columns and booking constraints.

VIP / starred

- Star a **patient** and/or a **session** — same visual language as “new / VIP” on the floor schedule for priority clients.

14. Admin todos, requirements & audit

مهام الإدارة والمتطلبات وسجل المراجعة

- **Admin todos** with reminder timestamps (local notify on mobile).
- **Center requirements** / to-buy / operational checklist.
- **Audit log**: action, entity, user, email, details, platform/device; exportable; immutable create-only trail for accountability conversations with staff.

15. Patient experience (same app)

تجربة المريض من نفس التطبيق

- Register / login (email, Google, or patient code flows as configured).
- Dashboard with personal upcoming appointments.
- My appointments + self-booking dialog.
- Profile edit (names AR/EN, phones, password).
- Price quote for transparent service/package pricing.
- Chat (as permitted) with the clinic.

16. Arabic / Egypt UX differentiators

ما يميز النظام للعيادات المصرية والعربي

- **True bilingual product**: ~450+ UI strings × AR+EN, RTL, Cairo/Amiri/Noto fonts — not a bolted-on translation.
- Arabic-native notification copy and PDF letter reshaping for correct joining.
- **EGP** finance + partnership-style lines (MANG / BASKET / slices).
- Schedule language: apologized / absent with-without cause; room grid for busy PT floors.
- Supervisor vs performing doctor + trainee credit without breaking doctor billing.
- Patient codes + dual phones; staff-created patients for low-email literacy contexts.
- Android APK update channel for clinics starting outside Play Store.
- One codebase: receptionist on web desktop, doctor on phone, owner on tablet.

17. Technology & what you are buying

التقنية وما تحصل عليه

Layer	Choice
Client	Flutter (Dart), Provider, go_router — Web / Android / iOS
Backend	Firebase Auth, Firestore, Storage, Cloud Messaging, Cloud Functions, Hosting
Documents	pdf, excel, Amiri/Cairo/Noto Arabic fonts, Arabic reshaper
Medical notes	flutter_quill (rich text)
Charts	fl_chart + admin PDF export

What a clinic receives (typical commercial package)

- Branded web URL (Firebase Hosting) + Android build + iOS build
- Firebase project (Auth, Firestore, Storage, Functions, FCM)
- Role setup for admin / reception / doctors / trainees / patients
- Training on appointments, packages, finance summary, reports
- This brochure + user guide materials for onboarding

Commercial terms (license, hosting fees, customization, training hours) are agreed per deal — this document describes product capability, not pricing.

18. Suggested live demo path (15–20 minutes)

مسار عرض حي مقترح

1. Login as admin → Dashboard today’s appointments (show supervisor / performer).
2. Appointments schedule view → room columns → create appointment with package + performing doctor.
3. Complete session → payment status → linked income.
4. Patient detail → rich medical note → generate patient PDF report.
5. Admin dashboard → session workload + income by doctor → export chart PDF.
6. Finance summary → show NET / MANG / BASKET → export bilingual PDF.
7. Chat group / broadcast → show media permission story.
8. Switch language AR ↔ EN and theme light/dark.
9. (Optional) Patient login → self-book + price quote.

19. ملخص عربي كامل للعرض على العيادات

نظام تشغيل عيادة علاج طبيعي متكامل — قابل للعلامة التجارية باسم عيادتكم

النظام تطبيق واحد (ويب + أندرويد + آيفون) يدير العيادة يوميًا بدل الدفتر وواتساب والإكسل: مواعيد وغرف، سجل طبي غني، باقات وجلسات، دخل ومصروفات بالجنيه، ملخص مالي للشركاء، شات داخلي، إشعارات وتذكير، لوحة إحصائيات، وصلاحيات دقيقة لكل دور.

المنصات

- ويب للاستقبال والمالك (تحديث فوري عبر الاستضافة)
- أندرويد وآيفون للأطباء والمرضى — مع إشعارات وتذكيرات محلية
- واجهة عربية/إنجليزية كاملة مع اتجاه يمين-يسار

الأدوار

- مسؤول · مشرف · سكرتير · طبيب · متدرب · مريض
- أدوار متعددة لنفس المستخدم + صلاحيات تفصيلية (حتى نوع وسائط الشات)

أهم الموديولات

- **المواعيد:** قائمة وجدول يومي بالغرف، منع التعارض، حالات حضور/اعتذار/غياب، فلاتر للطبيب والقائم بالجلسة
- **القائم بالجلسة:** العدّ الإحصائي للمشرف والمنفّذ دون التأثير على الدخل
- **المرضى:** كود مريض، سجل طبي Rich Text، مرفقات، تقرير PDF عربي
- **الباقات والخدمات وعرض الأسعار** للاستقبال
- **المالية:** دخل/مصروف + ملخص (NET / MANG / BASKET) وتصدير PDF ثنائي اللغة
- **التقارير:** Excelg PDF
- **لوحة المسؤول:** رسوم بيانية وجهد الجلسات وتصدير إحصائيات
- **الشات:** فردي/جماعي/بث مع صور وفيديو وصوت ومستندات
- **الإشعارات:** FCM + تذكير محلي للمواعيد
- **VIP وسجل مراجعة ومهام ومتطلبات المركز**

رسالة البيع بجملة واحدة

> نظام عربي/إنجليزي متكامل لعيادات العلاج الطبيعي: من الحجز والغرفة والسجل الطبي والباقات، إلى المالية بالجنيه وإحصائيات جهد الأطباء والمتدربين والشات والإشعارات — على

الويب والموبايل من منتج واحد.
